# Introduction

- *Descriptive and resultative V-de constructions*

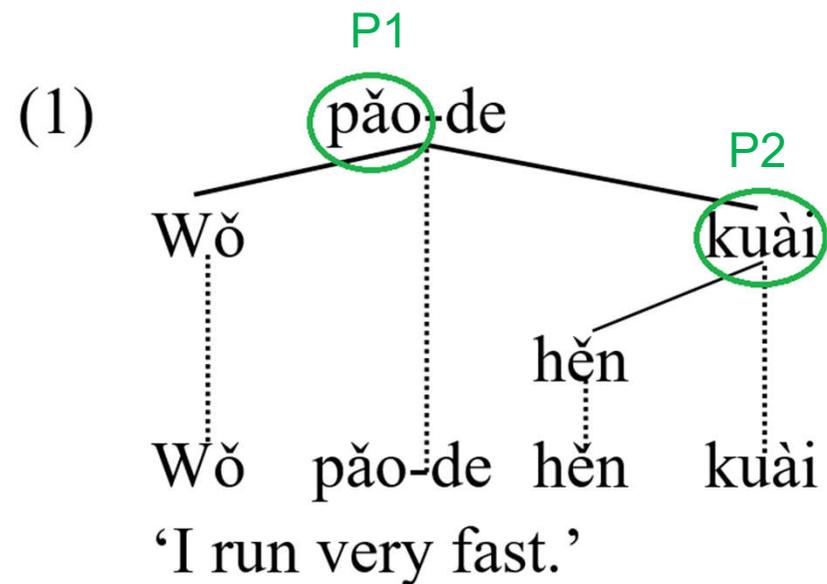

- P1-*de*           (1) (from Huang, 1988, p. 274)

- P1 & P2           Wǒ pǎo de hěn kuài.  
I run DE very (be)fast

‘I run very fast.’

我跑得很快。

- ***Secondary Predication hypothesis*** (e.g., Huang, 1988)

# Introduction

- When an **NP (NP2) intervenes** between P1 and P2

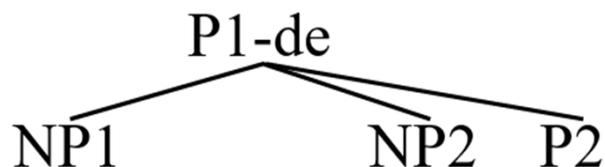

(2) (EM=Emphasis)

Wǒ pǎo de xiédài dōu diào le.  
I run DE shoelaces EM loosen LE

‘I ran to the extent that even my shoelaces got loose’

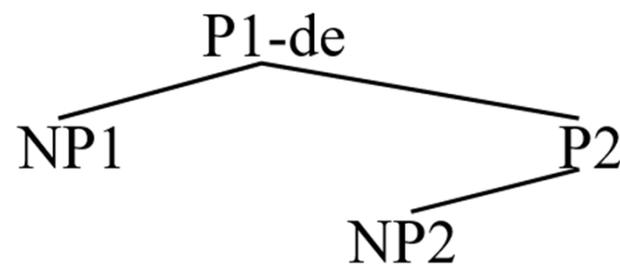

我跑得鞋帶都掉了。

- **Research question**

(a) Ternary-branching analysis

or

(b) Small clause analysis

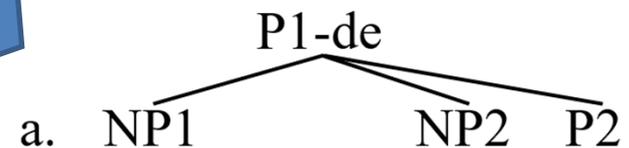

- **Chunking experiment**

- Assumption: Dependents should be grouped with their head

(3) I wait-DE him very anxious

- a. Wǒ | děng-de **tā** | hǎo xīnjiāo. – 35
- b. Wǒ děng-de **tā** | hǎo | xīnjiāo. – 3
- c. Wǒ | děng-de | **tā** hǎo xīnjiāo. – 2
- d. Wǒ děng-de | **tā** | hǎo xīnjiāo. – 3

‘I waited for him so anxiously.’

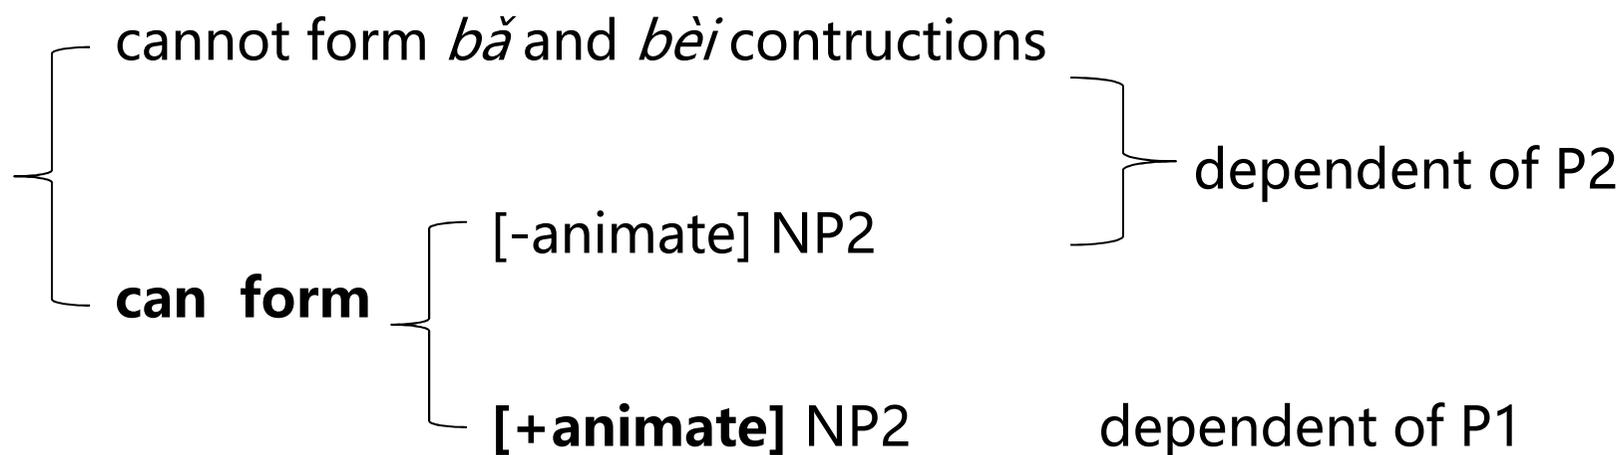

Ternary-branching Analysis

# Results and Discussion

- Argument of P1 : dependent of P1
- **Not an argument of P1: flexible analysis**

# Summary

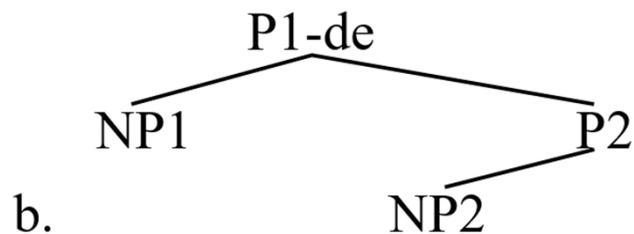

- **Status of the intervening NP (NP2)**

- chunking data
  - flexible analysis
- 

– Argument of P1;  
Argument of P2 only,  
can survive *bǎ* and *bèi* tests, and  
is animate

– Argument of P2 only,  
cannot survive *bǎ* and *bèi* tests, or  
can survive the tests, but  
is inanimate

# Acknowledgement

The research presented in this talk was funded by the Ministry of Education of the People' s Republic of China, Grant #15YJA74001.
